

Brew For TEA

Filter-in Carafe

Carafe-shaped cold brew tea bottle.

Following the filter-in bottle, we now have a carafe-shaped cold brew tea bottle. The filter and spout are integrated, making it easier to clean. The capacity is 1,000mL at the bottom where the spout fits. (Printed scale is 900mL)

Just add tea leaves and water to the bottle.

Cleaning is easy as the filter and spout are integrated into one part.

Filter-in Bottle

Wine bottle shaped cold brew tea bottle.

Created from the idea to enjoy cold brew tea like wine during meals, we designed the wine bottle shaped filter-in bottle. The filter is fixed onto the spout, so you can pour directly. Available in two sizes: 750mL and 300mL.

Just put tea leaves and water in the bottle. The filter is fixed onto the spout, so you can pour directly.

A newly released square bottle stores tea in a horizontal position

This is a square bottle made of PCT resin. A filter inside the spout enables you to make cold brewed tea in the bottle. Due to its large 1,200 ml capacity, you can prepare plenty of cold brewed tea or flavored water for storage.

The filter mesh is fixed directly to the inside of the spout, so you can pour directly.

The tea can be stored in a horizontal position in a refrigerator shelf.

The bottle can be placed in the door pocket of a refrigerator.

A heat-resistant glass teapot (kyusu) for enjoying Japanese tea in style.

To brew delicious tea, a large tea strainer that fits the glass shape thoroughly extracts the tea leaves' flavor. Designed for easy pouring, it allows smooth pouring down to the last drop. A heat-resistant glass teapot that lets you enjoy Japanese tea more stylishly.

The tapered spout makes it easy to pour tea. (CHZ)

The form enables users to pour the last drop of tea smoothly.

Jumping Leaf Pot

This teapot was developed with the thought of tea leaves jumping

It is round, the shape that allows the most movement for the tea leaves to jump. Since the lid and filter come together, tea is poured with the lid on. This is a simple and functional teapot.

A lid with filter
Can be poured
with the lid on.

Just put tea leaves and
hot water in the pot,
and you can pour tea
with the lid on.

Its round shape easily
allows leaves to jump.

The stainless steel strainer is
built with a stopper that secures
inside the glass.
Due to the etched mesh design,
the tea leaf is less likely to leak,
while also allowing for easy cleaning.

Jumping Tea Pot

The keyword for flavor is jumping

The secret to serving flavorful tea is to make the tea leaves jump. The round form of the Jumping Tea Pot allows the tea leaves to move and jump. The tea strainer located at the spout, which gives maximum space for the tea leaves to move.

As shown in the photo, insert the tea strainer and hook the hook onto the spout to secure it.
* If the spout is chipped, it can be repaired.

Tea Warmer

Keeps tea at a delicious temperature.

The shape of the top plate was redesigned to ensure the best flavor. Even large pots won't easily stop air flow, helping the candle stay lit.

The top plate has air holes that are hard to block, making it difficult for the candle to go out.
